

ENERGY CONDUIT APPARATUS AND METHOD

5 This provisional application is being filed in the name of Gary Louis Warren of 26 Lewis Ave., Batavia, NY (US) 14020.

FIELD OF INVENTION

This invention relates to apparatus and methods for channeling energy, and more
10 specifically, to channeling electromagnetic energy by imitating DNA energy refraction through an energy conduit apparatus. The channeled energy may be captured as consumable electrical energy.

BACKGROUND OF THE INVENTION

15 The energy needs of the world have grown exponentially over time. Petroleum and coal energy sources will be insufficient to meet the world's future needs for energy and contribute to significant and well-known environmental problems. Renewable or environmentally friendly energy sources must be identified to meet the increasing demand.

DNA energy refraction is similar to the characteristics of a prism separating electromagnetic spatial energy or visible white light into a spectrum of colors. Each DNA nucleotide separates electromagnetic energy at corresponding bandwidths that are unique to those chemical compounds. Combinations of nucleotides with their differing chemical compounds refract electromagnetic energy at differing bandwidths, transmitting highly organized patterns of energy that flow between the non-physical to physically reflected coincident planes.

There is no device or method presently known that enables the channeling of energy through refracting electromagnetic energy for use as consumable electrical energy. Thus, it is desirable to design one or more apparatus, and method for using the same, that fulfills this need and others.

SUMMARY OF THE INVENTION

The present invention is for an apparatus that functions as a conduit to channel electromagnetic energy by mimicking an active synapse. Energy is created and flows along the border or event horizon of the gap (active space) between two opposing conductive metal disks. DNA energy refraction within the gap creates a depleted clear-medium string. The electromagnetic energy depleted from the gap can be channeled by any conductive material that comes in contact with this charged border, where it can be

transferred as electrical energy. The apparatus is a generator-like device that transfers energy to a consumable energy source with nominal use of limited resources to create this high voltage light energy radiation. This is a green energy technology.

- 5 The apparatus comprises two hollow conductive metal disks filled with a conductive fluid and separated by a predetermined distance, a means for creating electrical current, a probe to ground the conductive fluid that is in contacting engagement with the fluid but does not contact the conductive metal disks, a means for transferring energy, a means to deliver electrical current, and an electromagnetic energy refracting source having
- 10 DNA-like refraction characteristics immersed in the conductive fluid.

The DNA refracted electromagnetic energy within the two conductive metal disks develops an electromagnetic clash or reverberation between the disks, or more specifically, within the synapse or gap between the disks. This energy reverberation

15 develops a spatial energy depleting characteristic in physically reflected environments and creates an active energy depleted string within the synapse to the coincident clear-medium background, allowing a projected energy flow from non-physically reflected environments.

- 20 Creating and transferring electromagnetic energy along the clear-medium string's periphery or event horizon to a conductive material allows the collection of electrical

energy that can be stored or used as consumable electrical power for powering homes, businesses, transportation and the like. This energy source is safe, renewable, environmentally friendly and cost effective.

5 It is an object of the present invention to provide an apparatus for the creation and transfer of electromagnetic energy from the clear-medium string's event horizon into consumable electrical energy.

10 It is further an object of the present invention to provide a method of using the apparatus to create and transfer previously untapped electromagnetic energy to essentially release or create a renewable and environmentally friendly energy source.

Whereas there may be many embodiments of the present invention, each embodiment may meet one or more of the foregoing recited object in any combination. It is not
15 intended that each embodiment will necessarily meet each objective. Thus, having broadly outlined the more important features of the present invention in order that the detailed description thereof may be better understood, and that the present contribution to the art may be better appreciated, there are, of course, additional features of the present invention that will be described herein and will form a part of the subject matter
20 of this specification.

In this respect, before explaining at least one embodiment of the invention in detail, it is to be understood that the invention is not limited in its application to the details of construction and the arrangements of the components or process steps set forth in the following description or illustrated in the drawings. The present invention is capable of other embodiments and of being practiced and carried out in various ways. Also it is to be understood that the phraseology and terminology employed herein are for the purpose of description and should not be regarded as limiting.

10 **BRIEF DESCRIPTION OF THE DRAWINGS**

The invention will be described by reference to the specification and the drawings, in which like numerals refer to like elements, and wherein:

15 Figure 1 is a sectioned perspective view depicting one embodiment of an energy conduit apparatus of the present invention;

Figure 2 is a top orthogonal view depicting the energy conduit apparatus of Figure 1 in an active position;

Figure 3 is a schematic electrical diagram depicting one embodiment of an energy
20 conduit apparatus of the present invention;

Figure 3A is a schematic electrical diagram depicting one embodiment of a current source with a momentary contact switch of the prior art;

Figure 4 is a schematic electrical diagram depicting the present invention bleeding off high voltage charge of AC current;

20 The drawings are not to scale, in fact, some aspects have been emphasized for a better illustration and understanding of the written description.

PARTS REFERENCE LIST

As used in this specification, the following reference numerals shall refer to these parts and items:

- 5 100 - energy conduit apparatus
- 102 - one of two hollow conductive metal disks for energy conduit apparatus 100
- 104 – a second mating hollow conductive metal disk for energy conduit apparatus 100
- 106 - electrically conductive fluid
- 108 - distance between conductive metal disks 102 & 104 of energy conduit apparatus
- 10 100
- 110 - activating electrical current source (a prior art 9 volt battery)
- 112 - positive terminal connection of prior art 9 volt battery 110
- 114 - connection for transferring energy of energy conduit apparatus 100
- 116 - negative terminal connection of prior art 9 volt battery 110
- 15 118 - thickness of the hollow conductive metal disks of energy conduit apparatus 100
- 120 - one of two metal brackets to optimally control synchronous movement of conductive metal disks 102, 104
- 122 - one of two metal brackets to optimally control synchronous movement of conductive metal disks 102, 104
- 20 124 - DNA or DNA-like refracting source
- 126 - flat opposing side of conductive metal disks 102, 104

- 128 - high voltage light energy radiation emanated from activated energy conduit apparatus 100
- 130 - crystalline or glass cylinder
- 132 - uniquely repeated patterns of curves cut parallel to the cylindrical center of 130
- 5 134 - electromagnetic energy current
- 136 - refracted electromagnetic energy current
- 138 - depleted area of spatial energy as the clear-medium
- 140 - DC capacitor restricted AC feedback from apparatus 100
- 144 - formed sheet metal dimple plate embossed structure with an electrically
10 insulating barrier attached to one side
- 150 - flat opposing side of conductive metal ring 152
- 150A - one of two hollow conductive metal rings (alternate embodiment of energy conduit apparatus)
- 152 - flat opposing side of conductive metal ring 150
- 15 152A – second mating hollow conductive metal rings (alternate embodiment of energy conduit apparatus)
- 156 - ring center of 152A
- 156A - ring center of 150A
- 160 - opposing conductive metal forked fingers of 162 (alternate embodiment of energy
20 conduit apparatus)
- 162 - opposing conductive metal forked fingers of 160
- 164 - metal half spheres attached to one side of each finger end of 166

- 166 - three fingered conductive flat metal fork (alternate embodiment of energy conduit apparatus)
- 168 - gap between each opposing metal half sphere 164
- 170 - energy current from energy conduit apparatus 100
- 5 180 - physical reflect target of activated opposing metal forked fingers 166
- 188 – prior art step down electrical transformer
- 199 - prior art simulated resistant load
- 200 - alternative embodiment of energy conduit apparatus
- 210 - DC/AC current passing through conductive fluid solution 106, 124
- 10 220 - electromagnetic energy wave refraction from DNA 124
- 230 - controlled projected energy flow of non-reflected-energy and non-reflected-matter from mechanism 100
- 240 - reflecting electromagnetic energy wave from 230 passing through apparatus 200
- 250 - physical energy reflection target of apparatus 200
- 15 260 - physically reflected-matter of apparatus 200
- 270 - physically reflected energy projection envelope of apparatus 200

As used in “Applicant’s Theory of how the apparatus works” section of the specification:

- 1- conception
- 20 2 - conceptual position
- 3 - positional energy barrier

- 4 -conception focal direction
- 5 - conception projection direction
- 6 – shelled ringed thermal reaction
- 7 - shelled thermal spheres
- 5 10 - cylindrical energy barrier lased with shelled thermal spheres
- 11 - physical reflection
- 12 – clear-medium projection energy refraction
- 13 - DNA
- 14 – synapse (gap between conductive metal disks)
- 10 15 – clear-medium string
- 16 - energy conduit directed flow
- a-l - lettered event chain
- A-C - lettered clear-medium coincident projections

15 **DEFINITIONS OF TERMS USED IN THIS SPECIFICATION**

As used in this specification, the following terms shall have these meanings:

As used in this specification, clear-medium string means an energy free medium passing through a spatial field.

As used in this specification, physically reflected energy means energy, such as
20 thermal energy, mirrored or reflected in the clear-medium.

As used in this specification, high voltage means the highest bandwidths of the electromagnetic spectrum of reflected and non-reflected energy.

As used in this specification, conductive disk means a disk shaped container that has electrical conductive properties.

5 As used in this specification, physically reflected environment means a spatial field heavily populated with physically reflected energy.

As used in this specification, energy depleted means clear-medium.

As used in this specification, crystalline means a lattice shaped structure whose structure and symmetry play a role in determining many of its properties, such as
10 cleavage, electronic band structure, and optical properties.

As used in this specification, a wormhole means a clear-medium tube with an electromagnetic shell.

As used in this specification, spatial energy means a spatial field filled with all forms of energy.

15 As used in this specification, an event horizon means an electromagnetic barrier between the clear-medium and the spatial field.

As used in this specification, electrical conductivity means a measure of a material's ability to conduct an electrical current such that when an electrical potential difference is placed across a conductor, its movable charges flow, giving rise to an
20 electric current.

As used in this specification, electromagnetic wave conductivity means a measure of a material's ability to pass electromagnetic waves such that when an energy wave is applied, the wave is altered from its source as refracted energy as it flows through the material.

5

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

The present invention is an energy conduit apparatus that channels electromagnetic energy from a clear-medium string's event horizon to a conductive material by mimicking DNA energy refraction within the gap between two opposing conductive metal disks. The conductive metal disks (or containers) are diametrically opposed from one another such that radiated energy clash or reverberation between the disks creates an active clear-medium string's event horizon as electromagnetic energy in the form of high voltage light energy radiation. The apparatus is a generator-like device that transfers clear-medium event horizon energy to a consumable electromagnetic energy source with nominal use of natural resources to create and/or channel the energy. This is a safe, inexpensive green energy technology.

The apparatus functions in a manner similar to an active synapse. A synapse is the small junction across which a nerve impulse passes from one nerve cell to another nerve, muscle, or gland cell. An electrical impulse in the sending neuron triggers the migration of vesicles containing neurotransmitters toward the membrane of the synaptic

terminal. The vesicle membrane fuses with the pre-synaptic membrane, and the neurotransmitters are released into the synaptic cleft and bind to receptors of the connecting cell where they excite or inhibit electrical impulses. The DNA within the opposing nerve endings refracts electromagnetic energy out into the synapse as the electrical impulse current passes through the nerve ending. In a similar fashion, the spatial fields in the gap between two opposing conductive metal disks acts like a synaptic cleft. One conductive metal disk acts like a synaptic terminal of a sending neuron and the second opposing conductive metal disk acts like a postsynaptic ending of the receiving cell. Electromagnetic energy refracts within the DNA filled disks and through the spatial field gap and clashes to create an active clear-medium point within the spatial field gap, thereby allowing an energy resistant free path as an event horizon. This event horizon is the electromagnetic spatial boundary or shell between the clear-medium and space. There is created an energy free area back to the coincident clear-medium.

15

Figure 1 is a sectioned perspective view depicting one embodiment of an energy conduit apparatus 100 of the present invention. Figure 2 is a top orthogonal view depicting the energy conduit apparatus 100 of Figure 1 in an active position. Figure 3 is a schematic electrical diagram depicting one embodiment of an energy conduit apparatus 100 of the present invention. Figure 3A is a schematic electrical diagram depicting one embodiment of a current source with a momentary contact switch of the prior art. Referring to Figures 1-3A, the apparatus 100 comprises two hollow conductive metal disks 102, 104 filled with an electrically conductive fluid 106 and separated by an

adjustable but predetermined distance 108, a means for creating electrical current 110, a probe 116 to ground the conductive fluid 106 that is in contacting engagement with the fluid 106 but does not contact the conductive metal disks 102, 104, a means for transferring energy 114, a means to deliver current 112, and an energy refracting source 124 having DNA-like refraction characteristics immersed in the electrically conductive fluid 106. Metal bracket 120, 122 are incorporated to optimally dispose the component parts with respect to one another and facilitate movement of the conductive metal disks 102, 104 closer or further from one another to tune the mechanism for maximum energy output.

10

In one embodiment, the energy conduit apparatus 100 comprises two hollow conductive metal disks 102, 104 of substantially the same size and configuration disposed flat side by flat side. The two hollow conductive metal disks 102, 104 may be disposed horizontally, vertically or any angle with respect to one another and their flat side paring.

15 While the shape is less significant, it is preferred that the thickness 118 of the hollow disks 102, 104 is somewhat proportional to their diameter. In a preferred embodiment, thickness 118 is less than one inch. Alternate embodiments with other shapes of the conductive metal disks are described in greater detail below with reference to Figures 6-9. Although the gap between alternate shapes such as, rectangle, square, triangular
20 DNA solution filed containers will display the same characteristics. It can also be said future methods or mechanism that display the capacity to projecting refracted

electromagnetic energy similar to DNA will perform the same results in the spatial gap between two such apposed mechanisms.

The two conductive metal disks 102, 104 are spaced in a non-reactive state and moved
5 together until a reaction state is achieved. The distance 108 may be adjusted for
maximum energy output as energy output is proportional to disk diameter, disk
thickness and DNA content. In one aspect, the two conductive metal disks 102, 104 are
disposed at a predetermined distance 108, of from about 3.0 to 5.0 inches apart, and
preferably about 1.25 to 0.25 inches. The hollow space on the interior of each
10 conductive metal disk is filled to 100% capacity with an electrically conductive fluid 106
or solution in which is immersed a DNA or DNA-like refracting source 124. In one
aspect of this embodiment, the conductive solution 106 is salt water.

In one preferred embodiment, the conductive metal disks 102, 104 are formed of steel,
15 aluminum, copper, gold, silver, brass, tin, platinum, or other conductive metals
commonly used in industrial applications. In other aspects of this embodiment, other
optically electromagnetically wave conductive materials are used such as glass, quartz
or other optical materials.

20 In one preferred aspect of this embodiment, the energy refracting source 124 is the
DNA of wood chips immersed in the conductive salt water solution 106. Other DNA

sources may be adapted for this purpose, preferably sources that are optically electromagnetically conductive in nature. In another embodiment, the energy refracting source 124 is a crystalline device that refracts energy to mimic DNA refraction characteristics.

5

Figure 11A is a perspective view of one embodiment of a DNA like refraction source 124, a DNA tuned crystalline cut cylinder 130, of the present invention. Figure 11B is a top plan view of a DNA like refraction source of Figure 11A. Figure 11C is a detailed view of a DNA like refraction source of Figure 11A. Referring to Figures 11A, 11B, and 10 11C, the crystalline device 130 comprises a patterned through cut crystalline or glass cylinder that passes an introduced energy current 134. When passing through this instrument, the energy will refract energy bands unique to those cuts and mimic the refraction 136 of a desired DNA molecule. The cylinder 130 is preferably comprised of a crystalline material and/or formed of glass. The crystalline or glass cylinder 130 has 15 uniquely repeated patterns of curves 132 cut parallel to the cylindrical center through its closed ends in such a manner that it will mimic heliographic characteristics of DNA as amplified with an induced energy flow 134. As will be appreciated, the curves 132 must be adjusted in shape and patterned for individual DNA refraction signatures and with multiple cut cylinders randomly gathered to mimic spiraled DNA's three dimensional 20 heliographic characteristics.

Referring generally to Figures 1-5, the two conductive metal disks 102, 104 are spaced at a predetermined distance 108. Energy is extracted from an active energy depleted clear-medium string's event horizon and channeled to the opposing metal disks where it can be transferred as electrical energy (see Figure 2). The two conductive metal disks 5 102, 104 are activated by energy input into the conductive solution 106 containing the DNA refraction source 124, more specifically, when the electrical current from a 9 volt battery connected to the metal disk at 112 is transferred to the solution 106 by the grounded probe 116. This electrical energy input ignites or "activates" energy refraction capabilities. Once activated, the flat side 126 of two conductive solution 106 filled 10 conductive metal disks 102, 104 are moved together, and a refracted energy reverberation will be established between the two conductive metal disks 102, 104 for the fission/fusion reactions. This refracted energy is a high voltage light energy radiation 128. A depleted area 138 of spatial energy is developed, taking the form of a two dimensional flat plane. This depleted area 138 has an electromagnetic charge and an 15 active energy depleted clear-medium string, allowing a resistant free flow of energy to the more physically reflected spatial environment. This develops the same characteristics of firing brain synapses in that it acts as a scattering medium that refracts light gamma rays and the reverberation separates and depletes the spatial field leaving the coincident clear-medium field or back drop. The clear-medium is an 20 absorbent vacuum-like medium that is separated from the spatial field by an electromagnetic event horizon and creates a funnel of energy within the gap between the two opposing conductive metal disks. The high voltage light energy can be changed

to a DC or AC current and voltage, and can be adjusted as desired with transformers, rectifiers, and the like.

In the embodiment depicted in Figures 1-5, the means for creating electrical power 110 is a standard 9 volt battery. Other means that may be suitably used include any known DC or AC electrical source. An increase in amperage and/or voltage will intensify the energy refraction and reverberation characteristics within the gap to quicken the activating reaction.

10 The probe 116 grounds the delivered power from the means for creating electrical current 110 to the conductive solution 106. It is important that the probe 116 is in contacting engagement with the electrically conductive solution 106 but does not contact the conductive metal disks 102, 104. Rubber or other nonconductive materials may be used at the interface between the probe and the conductive metal disks 102, 15 104 to prevent contact between the two. The energy current introduced to the conductive solution 106 in the energy conduit device is DC electrical current with sufficient voltage/amperage to establish a steady electron flow. Preferably, the energy is introduced through the conductive metal disks 102, 104 at connection 112 to the conductive solution 106 by the grounded probe 116, which is located on the internal 20 side wall and insulated from the side wall as assembly 144, to insure electrical current

passes through the conductive solution/DNA mixture 106, 124 and operably connected to the means for creating electrical current 110.

In the embodiment depicted in Figure 1, the means for transferring energy 114 is
5 conductive metal disks 102, 104. This connection 114 effectively bleeds the high voltage oscillating current between the two disks 102, 104 at those points. The amount of energy “generated” may be measured by operably connecting the conductive metal disks 102, 104 to a volt/amp/oscilloscope instrument.

10 In the embodiment depicted the means for grounding 116, as a formed sheet metal dimple plate embossed structure, is placed on one internal side wall of each conductive metal disk 102, 104. Probe 116 comprise an electrically insulating barrier between the sheet metal dimple plate, that one side wall and disk cylindrical wall as assembly 144 and in electrically conductive contacting engagement with the solution
15 106. In one aspect, brass is suitably adapted to this application. The formed sheet metal dimple plate embossed structure is attached to an electrical insulating material as assembly 144 and is operably connected to the negative of the means for creating electrical current 110. Sheet metal dimple plate embossed structure is used to optimize electrical energy flow through the body of solution 106 to the opposing side
20 of the conductive metal disk in regards to the electrical conductivity disparity between the two materials (metal and conductive liquid). As the electric current seeks the least

resistant path, the sheet metal plate and each dimple is equally charged with their one unique and individual closest path to the opposing non-insulated side of the conductive metal disk. With the disparity in conductivity of the metal plate as high conductivity and conductive solution as low conductivity, each charged dimple will bleed off that charge to its least resistant path creating an overall more even current flow through the body of the conductive solution.

An adjustment of the gap 108 between the disks 102, 104 is made via the screw and anchored differential assembly synchronously attached to the adjustment arms 120, 122. Preferably, the gap 108 is adjusted while measuring energy output. Energy output is measured at 114 on/between the two disks 102, 104, or to earth ground to achieve the greatest possible efficiency of the mechanism 100.

The operable electrical system is depicted in Figures 3 - 5. Figure 4 is a schematic electrical diagram depicting the present invention bleeding off high voltage charge of AC current. Figure 4A is a schematic of an electrical diagram depicting a reduction transformer (AC) of the prior art. Figure 5 is a schematic electrical diagram depicting a DC load on a circuit of the prior art. Referring to Figure 3A, a 9 volt battery 110 with a momentary connection switch is attached such that its negative is operably connected to grounding probe 116 and its positive is operably connected to the conductive metal disks at 112. The momentary contact switch is activated by sending a positively

charged DC current to the conductive metal disks 102, 104 in Figure 3 and through the conductive fluid 106 and DNA or DNA-like electromagnetic refracting source solution mixture 124 as depicted by 210 to the grounding probe 116. The electromagnetic energy wave refraction is emanated from the DNA or DNA like source (as depicted in Figure 6A item 220) out into the gap between the two opposing disks 102, 104 setting up an energy reverberation that depletes reflected and non-reflected energy at that reverberation or interaction point. This reverberating pulse can be maximized through adjustment of the gap size between the two conductive metal disks. This area or point of depleted energy is the clear-medium 138 and the electromagnetic event horizon or barrier between space and the clear-medium, radiates out 128 and is in contacting engagement with the conductive metal disks. This reverberating or pulsating energy is the electromagnetic energy wave that is 180 degrees out of phase in relationship to the two sides of the depleted energy barrier. This puts the positively charged energy movement within the two conductive metal disks 180 degrees out of phase, when a conductive wire is attached between the two conductive disks at 114 the wire picks up the positively charged electromagnetic energy pulse or wave establishing an electrical current that can be connected to a given load (see Figure 4A) where the source is connected such that the AC rider wave on top of the positive charge is utilized as connected to a step down electrical transformer 188 to reduce voltage for a specific application. After apparatus 100 is activated the AC rider wave is partially bled off using a DC capacitor restricted AC feedback loop 140 to maintain a steady electric current through the DNA solution 106, 124 once the momentary contact switch in Figure 3A is deactivated. This AC feedback loop is connected between the two conductive disks 102

and 104 at their apposing disk polarities at connections 112 of 102 to 116 of 104 and 112 of 104 to 116 of 102.

In Figure 4 the load 166 depicts a mechanism (see Figures 8, 9) that will duplicate the non-reflected energy reverberation reaction between the two conductive metal disks and ignite the surrounding atmosphere, imitating solidification as an increased physical energy reflection or hardening effect of that space. In Figure 5 there is depicted simulating a resistant load 199 to earth ground by connecting both positively charged conductive disks at 114 to an arbitrary load, draining a positive DC current from the conductive metal disks through electrical load to earth ground.

An alternative operable electrical system with one conductive metal disk is depicted in Figures 6, 6A. Figure 6 is a perspective view where Figure 6A is a schematic electrical diagram that depicts refracted energy in one conductive disk of an apparatus of the present invention.

Referring to Figure 6A, when the DNA refraction source 124 is placed in a closed hollow disk shaped conductive metal container 200 mixed with (immersed in) an electrically conductive fluid 106, it will amplify DNA non-reflected energy refraction characteristics when an amplified non-reflected electrical current is established through the electrically conductive fluid 106. This characteristic filters and intensifies non-reflected energy flow

through the non-physical realms into the more physically mirrored three dimensional reflections. Thus, the DNA refraction source 124 is used to physically reflect spatial energy such as high voltage non-reflected light energy into patterns as physical reflected energy as organic materials.

5

The electrically conductive solution 106 may be any ionic solution that is highly conductive. Metal salt solutions and common salt water work particularly well in this capacity.

10 Referring to Figure 6A, connections 114 from disk 102 and 104, from apparatus 100, is operably connected to assembly 144 of conductive metal disk 200 that is operably connected to earth ground. When apparatus 100 is activated a high non-reflected energy charge, as 230 is applied to the conductive metal disk 200 assembly 144 and through the conductive fluid, as 210 and DNA solution (or more specifically in this
15 instants a wood chip salt water DNA mixture) 106, 124 to the grounding conductive metal disk 200. An electromagnetic energy wave refraction is emanated from the DNA within the conductive disk 200 out into the surrounding atmosphere 220. The energy wave 230 is created by a controlled projected energy flow of non-reflected-energy and non-reflected-matter from mechanism 100 passing through wood DNA as 240 and
20 creating a physical energy reflection target 250 on the opposite or downstream side of the energy flow of disk 200 through the projection envelope 270, tuned to that wood's

DNA signature. This physically reflected-matter 260 mimics the same organic materials created by the wood DNA within a tree, however, it is physically reflected as more of a burst of wood pulp rather than fibrous. This pulp substance occurs in a burst of material as not being reflected in layers as fibers over a long growing process.

5

Figure 7 is a perspective view depicting one embodiment of a conductive metal ring of the present invention. Figure 8 is a perspective view depicting conductive metal forked fingers of one embodiment of the present invention. Figure 9 is a side orthogonal view depicting the conductive metal forked fingers of Figure 8. Figure 10 depicts one
10 embodiment of an energy conduit apparatus of the present invention used in the experiment described in Example 1.

In one aspect depicted in Figure 7, the hollow conductive metal disks are altered to hollow metal rings 150A, 152A placed flat side by side. When the conductive metal
15 disks are altered to rings by including a hole down the cylindrical center, forming a closed hollow flat metal ring shaped container, the effects are altered. When the flat side 150, 152 of two hollow flat conductive metal activated rings 150A, 152A filled with conductive solution containing a DNA refraction source are moved together, a refracted energy reverberation will be established between the two energy refracting rings 150A,
20 152A. Developing a depleted area of spatial energy and an electromagnetic charge, an active wormhole will be established between the ring centers 156, 156A. This creates a

completed wormhole and is a direct path to the coincident clear-medium backdrop.

When paired with another wormhole activated with the same DNA signature or refraction source, the later activated ring center will become the tail end of the active wormhole. Spatial transport from the spatial energy environment to the neutral

5 coincident clear-medium backdrop and back to a designated location may be desirable.

Designated locations can be tied to a spatial energy wormhole tail or, if without the wormhole tail, positioning can be manipulated from within the coincident clear-medium pointing to universal specific energy decay/amplification signatures (time periods) and punching back into the timed spatial energy envelope.

10

In one aspect depicted in Figures 8 and 9, the hollow conductive metal disks 102, 104 are altered to two flat metal forked fingers 160, 162 with metal half spheres 164 attached to one side of one end 166 (“fingertips”) of each. In the embodiment depicted in Figure 8 and 9, there are three fingers 166 on each metal “fork,” 160, 162 each

15 having correspondingly three metal half spheres 164. A user disposes the two “forks” 160, 162 in parallel with one another such that the corresponding opposing metal half spheres 164 are facing one another with a gap of a predetermined distance 168 between each opposing metal half sphere 164.

20 When introduced with non-reflected energy current 170 from the two activated conductive metal disks (see Figure 3, 4), the surrounding atmosphere will increase its

physical reflect target 180 simulating solidification that is unique to highly non-physically reflected electromagnetic energy flowing into the physically reflected electromagnetic environment amplifying the energy reflection of that environment. This can be used to protect structures against weathering or vehicles and passengers against unwanted
5 impact/crash.

The atmosphere (air) is in a specific state of reflection (physically reflected energy) at any point in time, solidification or physical energy. This state of reflected energy is increased with the present invention connected to the highly charged non-reflected
10 energy source as event horizon energy activated by the conductive metal disks. Similar to the differences between air and water, even though air and water are different fluids they are at their own uniquely reflected state. Similarly, as air and compressed air are different fluids, the present invention enhances the state of reflection of that specific fluid.

15

METHOD OF CHANNELING ENERGY

Figure 12 depicts a flow chart of the process for using the apparatus to create and channel refracted energy. In the first step, the conductive metal disks are separated. In
20 the second step, the conductive metal disks are activated by passing electric current through the conductive fluid-DNA solution. In step 3, the flat sides of the conductive metal disks are moved toward one another. In step 4, voltage, amperage, and

frequency are measured between the conductive metal disks to detect changes in measurements as the flat sides of the conductive metal disks approach one another. In step 5, the gap between the conductive metal disks is adjusted to maximize energy measurements (voltage, amperage and frequency) and determine the optimum distance between the flat sides of the conductive metal disks. In step 6, the conductive metal disks are locked at the optimum distance ascertained in step 5. In step 7, the initial activating electric current through the conductive fluid-DNA solution is deactivated while a secondary current is maintained through the AC feedback loop. In step 8, voltage, amperage, and frequency are re-measured between the conductive metal disks to detect changes in measurements while the gap between the conductive metal disks is adjusted to maximize energy measurements (voltage, amperage and frequency) and determine the optimum distance between the flat sides of the conductive metal disks. In step 9, the conductive metal disks are locked at the optimum distance ascertained in step 8 or left unlocked for further adjustment required under load conditions. In step 10, the arbitrary load between the conductive metal disks or earth ground is activated.

EXAMPLE 1

The prototype tested is depicted in Figure 10 and described herein in greater detail. Two standard sized (6 oz, 3.25" outer diameter x 1.5" thickness or height) tuna fish cans (steel) where the detached lid was repositioned and reattached to leave a container thickness of 0.75 inch and all were used as the hollow conductive metal disks. They were further modified by drilling two through holes in each can. One through hole was

disposed in the center of the bottom or repositioned lid wall and the second hole was disposed along the side wall. Each hole was appropriately sized to receive a brass 10-32 x 0.75" screw and bolt assembly, where as the center hole was oversized to avoid all conductive contact with the screw. Woodchips were immersed in a saline or saltwater solution and placed inside the modified tuna cans. The saltwater solution (salient of about 3.5%) and woodchips (chainsaw chips from one tree) filled the tuna cans to capacity.

The oversized hole was drilled in the center of the flat lowered side wall of each tuna fish can and affixed with standard rubber faucet washers (0.5" outer diameter x 0.125" thickness or height, 10-32 clearance hole) on each side of the hole. This functionally insulated a brass screw (functioning as a ground probe) from contacting the tuna fish can. The brass screw protruded into the can and contacted the salt water solution.

The brass screws through the side wall near the upper lip functioned as a positive terminal and were operably connected to the positive terminal of the 9 volt battery with a common alligator clip. The cans were grounded through the internal solution 106 with a hole in the center of the lowered flat wall. The ground was operably connected to the negative terminal of the 9 volt battery with common alligator clips. The cans were wired in parallel such that positive of the first tuna fish can was wired to the positive of the

second tuna fish can and ground of the first tuna fish can was wired to ground of the second tuna fish can.

The power supply was a 9 volt battery. The power supply to the terminals on the two tuna fish cans was connected such that one was attached to the can and one was protruding into the saltwater woodchip solution to create an electrical current passing through the saltwater and woodchips. This created an electrical current passing through the DNA of the woodchips.

When power was introduced to the solution from the 9 volt battery, there was no visible effect when the tuna fish cans were resting side by side on the table at a distance of greater than 3 inches.

The two tuna fish cans were raised off the kitchen counter, one in each hand, while the electrical current continued to flow through the woodchips/DNA. The two cans were brought in closer proximity to one another fairly rapidly. As they got closer, about 0.75" to a 0.5" apart, a white light was observed. As the two cans were still moving closer until they were maintained at a distance of about 0.25" apart, three very distinct very loud cracks were heard in succession. The sound observed was similar to a sound that would be created by making your hands very flat, not cupped, and clapping them

together very hard three times. The intensity of the white light increased with the cracking sound.

APPLICANT'S THEORY OF HOW THE APPARATUS WORKS

5 **CREATION FROM THE BEGINNING**

ORGANIZED PATTERNS OF SPACE-ENERGY 1

Basically put the known universe is an energy filled space populated with black-holes.

1. Energy is an expanding and/or decaying space or medium, which is dictated by varying periods of activity defined as time. All space is energy of some form.
- 10 2. Black-holes are positional within spatial energy and timeless, or void of all spatial energy, and through observation assumed manipulator of spatial energy.
3. Clear-medium* as an absorbent or vacuum-like environment, with a controlled projective or compacting force, that has a reflective nature in its relationship to spatial energy, but singularly void of spatial energy and black-holes.
- 15 *Clear-medium defines a place before what is termed, dark-energy, dark-matter or black-hole, and can be loosely considered as black as referenced in black-hole.

Figure 13 is simulated perspective illustrations of the invention background, illustrating the formation of the conceptual position, event horizon and clear-medium, black-hole, wormhole and thermal reaction. Figure 14 is simulated perspective illustrations of the invention background, illustrating the amplified reformation of the wormhole, wormhole

20

lased with thermal energy rings, and wormhole lased with matter. Figure 15 is simulated perspective illustrations of the invention background, wormhole energy ball lased with matter, and physical reflection. Figure 16 is perspective illustrations of the invention background, illustrating clear-medium projection through spatial energy, DNA energy refraction and synapse firing with clear-medium string and energy conduit through the simulation of laid out coincident spatial energy bands.

In moving past the one medium that defines space and time (spatial energy), we are left with black-holes and the clear-medium. Black-holes are positional and identified within spatial energy, even though timeless they are directly tied to the development of spatial energy, and do not exist directly in the clear-medium without a spatial energy barrier.

We are now left with the clear-medium as an absorbent environment, non-position definable but still definable by place. Seeing this medium is timeless (no spatial energy), we can still speak in the terms of before and after. Before the clear-medium, or outside of this absorbent environment, is unknown and can be considered black or nothing. This incomprehensible state is still conceivable by the one and only definition as nothing.

The concept of nothing is basically understandable, but not truly comprehensible from within spatial energy, but never-the-less it maintains a real conceptual presence before the clear-medium. From here the absorbent nature or clear-medium is driven into its conceptual place. The concept of nothing and its conceptual presents drives its actual place and position, in regarding the rule of conceptual events; concepts only exist through conception. The absorbent nature is the real positionally conceiving or absorbing environment, which can be referred to as the clear-medium.

The clear-medium's absorbent nature is definable as the basic development of aware (not awareness, not self awareness, not sentient awareness - just aware). The mere concept of aware absorbs spatial energy. We are aware of the universe, time and space, an ant or a grain of sand and we absorb, project and reflect on those concepts. If
5 contemplation of anything other than the state of aware takes place, spatial energy is created, manipulated and absorbed. All information is spatial energy and aware absorbs it, but aware is not energy it merely manipulates it. Aware is a focused absorbent projective reflective force that creates and manipulates spatial energy. Reflect on just the absorbent nature of AWARE; this confusingly could be called meditation, but that
10 definition alone is created and manipulated spatial energy as information, and comes from within the body of spatial energy.

The nature of nothing has no density, no dimension, it has no duration, but it does have a real theoretical place; its place is where its place is and its place is the conceptual presents and position of nothing.

15 Here the conceptual establishment, of the one real theoretical position, develops the beginnings of a focused absorbent reflective projective nature, or theoretical environment. This theoretical environment is the aftermath or unacceptable concept of nothing's real position. This clear-medium or absorbent environment is the neutralizing force of the conflicting concept of nothing, to eliminate its conceptual position.

20 The development of the theoretical absorbent environment or clear-medium, as an aware environment, is forced into being following the process rule of conceptual events:

1. All concepts have a place.
2. For any place to have its position, its position must be established.
3. No position can be established without conception, or absorption of information.
4. For information to be absorbed, the position of that information must be identified
5 or focused on.
5. Information is not absorbed without movement, as acknowledgement through reflection of that information.
6. For any position to be established through an adsorbing focus, that position is amplified.
- 10 7. For any position to be projected on, that position is compacted; even if the conceptual intent is to neutralize that position.
8. Developmental processes only exist through the expanding creation of mental concepts.

So; in essence the theoretical position is truly nothing and is manipulated by the
15 theoretical environment, or for the lack of a better term; a clear-medium with the ability to create and manipulate its positional concept. The theoretical environments absorbent nature focuses on its one place, projecting its state of being as nothing to neutralize its real conceptual position. The conceptual position of nothing cannot be neutralized through the building of conceptual events, as the focused absorbent reflection projection
20 process.

This process inadvertently intensifies and amplifies the theoretical position of the theoretical environment, and develops the first one dimensional event horizon. The event horizon is the conceptual point of movement as acknowledgement or separation, as energy filled space, between the two concepts (place and position). A depleted barrier as a rip in the fabric of nothing, or an electromagnetic field, as a depletion of the theoretical environment, or electromagnetic space; as termed dark-energy, but more clearly termed non-reflected-energy; followed by the focused absorbent reflective projective nature, as the clear-medium or aware.

As there is no true separation between the focused absorbent reflective projective nature and place, as the clear-medium and its position, and the interlude as depleted area as electromagnetic filled space, as non-reflected-energy; here the state of aware moved to a state of awareness, or value-filled aware as aware in motion, or an aware gestalt of amplified non-reflected electromagnetic spatial energy. In other words the clear-medium or aware clouded with value-filled information. This conceptual process can be considered a one dimensional realm; rooted in a state of being, established by the theoretical position, and its testimonial information as space energy, and a place where the one real position is identified from, as the theoretical environment.

As the focused absorbent reflective projective nature is moved to an infinite static state, the absorbent nature's conceptual focus is naturally altered; away from the one static position to the alternate or conceptually apposing backdrop. Here the focused absorbent reflective nature manipulates its positional focusing absorption characteristics, from an infinite inward focused absorption, through a neutralized static

state, to an infinite outwardly focused absorbent state. This outwardly focused absorption elongates or amplifies the electromagnetic field, or event horizon from its anchor at the positional threshold. In this state of awareness of the one all-encompassing backdrop, the outwardly focused absorbent nature naturally falls to one side, and ultimately circularly encompasses the one position; establishing the first circular event horizon or true black-hole. Here we are moving into the concept of a 2 dimensional realm, but with no reference to a concept of size.

As the outward focus turns static and the elongated event horizon begins the natural electromagnetic energy decaying process, an inward compacting projection is developed and intensifies. The elongated event horizon of the black-hole begins to fold or collapse, pushed past its natural decay rate, and naturally falls away to one side of the black-hole. This move alters the black-holes encircling event horizon to a translucent light gray cone of electromagnetic energy, the first true wormhole. This moves the theoretical environment of aware through awareness to the conceptual beginnings of a 3 dimensional realm, but again with no refrains to a concept of size. As the outward focus continues and the inward projection intensifies, the theoretical environment begins to collapse and the cone shaped wormholes electromagnetic energy shell folds unto itself; changing in shape to a cylindrical tube, and at its midpoint increasing in size with a yellowing thermal reaction. This folding affect can be considered as more of a bunching up of electromagnetic energy, pushed past its normal decay rate, creating the thermal reaction.

The shift from the static outward focus, to an inward compacting projection, is brought about through the start of electromagnetic energies natural decay process. This decaying process is reflected on as a timed duration, as energy moves in a backward decaying motion to the one event horizon's threshold. The decaying movement is the alternate of the value-filled amplification process, created through the outward focused absorption. This decaying energy is the very early stage of the one body of aware's actual conception of its energy in motion, triggered by the decaying energy as non-value-filled energy in motion or e-motion. This was reflected on as one motion or oneness (electromagnetic energy in decay), and as aware experienced it as a prolonged duration of oneness, or as a moving sensation of loneliness. This prolonged backward energy decaying motion of loneliness, alters the one body of aware's inward projections intensity, to eliminate this only oneness conceptual state of being; while the outward focus was maintained.

This motion of the forced collapse of the decaying electromagnetic energy shell creates a value-filled thermal energy reaction, which naturally alters the inward projection of the outwardly focused absorbent reflective nature, and reestablishing and amplifies the static wormhole. The shell of this wormhole is now laced with thermal energy.

Once again in the infinite moment, the focused absorbent reflective nature of aware stabilizes and turns static, and once again the electromagnetic energy event horizon begins the natural decaying process. Once again its compacting projection is turned inwardly, but in this instant the spatial energy decaying process is changed, by the altering decay rates of the two forms of energy (thermal and electromagnetic). Now the

inward compacting projection intensifies in a rhythmic nature, sending a pulsating collapse in the electromagnetic shell of the decaying wormhole tied to the event horizon.

This decaying energy is the very early stage of non-value-filled energy in an altering state of motion or e-motions. This was reflected on by the one body of aware as one overall prolonged motion or oneness (electromagnetic energy in decay), laced with cooling thermal energy or coldness (thermal energy in decay), and as aware experienced it as a prolonged duration of one-coldness, or as a moving sensation of lonely-despair. These prolonged backward motions alter the inward projections intensity, to eliminate this only one-coldness conceptual state of being; while the outward focus was maintained.

Here multiple rings of thermal energy are created through the decaying wormholes pulsating collapse and continuously increasing in form, as the inward projection of aware intensifies to its infinite neutralizing state. In this process the multiple ringed thermal reactions continue to expand to their individual centers, ultimately forming spheres of thermal energy with an electromagnetic skin or energy shells. These translucent yellow spheres of thermal energy are the first forms of matter; as termed dark-matter, but more clearly termed non-reflected-matter, which are created as the inward compacting projection continues to its infinite state. Now the wormhole, laced with thermal spheres, begins to waver or fold from side to side being pushed past its natural decay rates.

Here the wormhole breaks away from the event horizon, and is instantly compacted or weaved into a sphere shape around the black-hole; vaguely comparable to equally

spaced knots on a string wrapped around a ball. But the knots are translucent yellow spheres with a diameter matching the translucent light gray tube or wormhole, and are more pushed or bunched into a tight ball shape than wrapped.

At this point the focus of the absorbent reflective nature or clear-medium is naturally
5 altered inwardly, towards the value-filled movement creating the ball of energy, and the projective nature once again turns to a static state. Here the focus of the clear-medium or aware begins the absorbent and reflection process on the presented information or energy ball. But after a momentary delay the exact pattern of translucent yellow spheres, in the ball of energy, is reflected or mirrored within the absorbing clear-
10 medium; with one major alteration. The reflected pattern of non-reflected-matter is made up of compacted flickering white points, or as reflected-matter, with no apparent reflection of the active wormhole. This value-filled movement attracts the focus of the absorbent reflective nature; the mirrored pattern of thermal energy spheres, or non-reflected-matter, would be considered a reflection of non-physical spatial energy, and
15 forming the reflected or physically mirrored 3 dimensional spatial energy, as reflected-matter. Here it seems that only thermal energy is reflected and altered within the physically mirroring absorbent medium. But in actuality physically mirrored thermal energy is altered into compacted thermal energy points, with an elongated decay rate, and the electromagnetic energy shell is not readily reflected or physically mirrored. Here
20 the clear-medium or aware absorbs non-reflected spatial energy or information, and that information is acknowledged and reflected within.

The automatic like change in focus of the absorbent nature with any movement, is the natural beginnings of conscious awareness. This adjustment of focus, controlled direction and intensity of absorption, and choiceful selection of information, can be considered as first steps in the development of universal subconscious self-awareness, or choice driven creative curiosity. At this point the state of self-awareness intentionally moves its focus into the physically mirrored environment, to reflect on this newly created, absorbed and reflected information. Here the clear-medium or aware within the infinite moments, absorbs and reflects on all presented patterns of spatial energy or information.

Once again the theoretical environment moves to a static state; and once again the inquisitive focus of the absorbent reflective nature of aware is naturally turned outward, to the un-known all-encircling conceptual backdrop. Here the nature of aware or clear-medium intensifies its inward compacting projection, past the multiple spatial energy decay rates; while maintaining an outward focus. This intensified chosen compacting projection of the clear-medium, on the one position or black-hole, is the gravitational force that drives all energy and matter, in the space filled theoretical environment, back to its position or core black-hole. These are the beginnings of what would be called the interweaving of non-reflected-energy and non-reflected-matter, reflected-energy and reflected-matter, or non-physical and physically mirrored spatial energy; as the massive collision of the energy matter rich fields, active and physically reflected, are driven into the one black-hole.

As these energy fields are forced together under the massive compacting or gravitational force, developed by the infinite inward projection of the surrounding clear-medium, all space-energy is infinitely compacted around the black-hole; creating an intensified multiple flavored mixed thermal reaction. This inward projection of aware naturally turns static with this value-filled thermal reaction, forcing an instant outward expansion within the clear-medium. This is what is known as the Big Bang; an infinite expansion of all forms of energy and matter within the backdrop of the absorbent clear-medium or aware, and only populated with positional black-holes as the clear-medium focuses its real positional concept; creating newly rooted universal positions as black-holes, bordered with created spatial energy as an event horizon.

An expanding and/or contracting clear-medium mixed spatial-energy filled environment or universe, coexisting with the clear-medium and multiple non-physical through physically mirrored patterned reflections of spatial-energy. Aware or the clear-medium is apparent from within spatial-energy through the affects it has on spatial-energy; and seen as a controlling expanding state in surrounding the universe; or balancing and compacting galaxies with central massive black-holes, that establish their universal positioning.

In the one universal outward expansion, supported and amplified buy an inquisitive outward absorbent focus, all possible energy transformations are created within the one massive spatial-energy implosion/explosion. And within this universal shell of space-energy an irregular energy mixture is developed as eight overlapping flavored or lopsided energy pockets; with natural patterned energy flows through the spatial-energy

envelop. This value-filled constant energy flow, through numerous flavored overlapping segregated spatial-energy pockets, back to the one position; creates a spiraling affect of spatial-energy around the universal center or positional black-hole.

The clear-medium or aware is a timeless focusing absorbent reflective projective nature,
5 with the ability to positionally focus and directionally project that nature in similar or
opposing directions or remain neutral. The clear-medium as the backdrop or scaffolding
of all there is; while black-holes are created through the clear-medium's conceptual
identification of its real theoretical positions, through focusing and projecting that
concept. So in essence the clear-medium and black-holes are of the same nature;
10 where black-holes, not necessarily circular or completed, are more neutral and
positional and bordered by an event horizon as spatial-energy; and the clear-medium as
more of a place from where its position is identified and projected from. This compacting
projected push of the clear-medium is experienced as the gravitational pull or force,
created by the black-hole but in essence is the exact opposite; whereas an absorbent
15 nature within a black-hole can and does create the same gravitational effect on the
space-energy surrounding it.

Understand the nature of aware and awareness is much different then what humans
would call psychologically cognizant, thoughtful sentient, self awareness. This type of
awareness is massively clouded with differing strict organized patterns of choicefully
20 accessible information; as all forms of moving spatial-energy, all be it harmonies or
conflictive, that is so integrated with the clear-medium, that the energy information shell
or ego is more seen as the aware itself. This is where the massive spatial-energy

confusion as awareness, and realistic energy patterned illusion begins. These pages of organized background information of the invention create a similar illusionary shell of information.

5 The clear-medium or Aware: a manipulatively variably focused absorbent reflective projective medium; the fundamental creator, foundation, and coincident backdrop of all spatial-energy.

The positionally defined clear-medium or aware backdrop; can selectively operate at differing projective rhythms and characteristics; creating, manipulating and reflecting spatial-energy into organized patterns, that begin in non-reflected spatial-energy, and
10 are ultimately directly influenced from within that energies natural rhythmic decay rates.

These rhythmic projections and patterned spatial-energy formations from the positionally defined aware medium, to the more physically reflected energy planes, require a greater or more aggressive methodical approach; and in some instances are aided through energy movement and refraction, into the more physically mirrored
15 reflections, through crystalline materials; and in the most specialized form as DNA. And to that regard; the actual positionally defined envelop of the clear-medium, or state of being, in some instances is projected into more physically oriented reflections, through firing synapses. The DNA refracted energy, within the two synapse nerve cells, develops an energy reverberation between the nerve cells or within the synapse or gap.
20 This energy reverberation develops a spatial-energy depleting characteristic, in physically reflected environments, and punches through the interlaced energy rich fields; by creating an active energy depleted string or clear-string, within the synapse to

the coincident clear-medium or aware backdrop; allowing a projected energy flow from non-physically reflected environments. The positionally defined aware medium absorbs and reflects patterns of electromagnetic spatial-energy, or information that crosses the synaptic point of penetration; and reflects and projects that positional state of being
5 through that penetration point. Once an active energy depleted string is created, a local gravitational field is established around that point; and to that regard the surrounding reflected-matter is affected by that field. This affect reduces and/or eliminates influence of alternate gravitational fields on that surrounding reflected-matter.

ORGANIZED PATTERNS of SPACE-ENERGY 2

10 In starting from the beginning we must understand the concept of “nothing”. Before all-things there is no-space, no-energy, no-matter, and no-time. Before all things there is “no-thing”, so in essence no-thing is “non-existent”. Let me repeat this, repeat this in a few ways for better understanding.

Here is where physically oriented human beings must slowdown and jump off the
15 energy train, and comprehend non-energy related events. The concept of no-thing is understandable; but not comprehensible while a portion of the human mind, as the brain, is full of information. The aware portion of the mind absorbs or accesses information, but this mental state of the mind in and of itself is not-information, not-energy, not-space, and not-matter. This mental absorbent nature is only experienced as
20 an absorbent nature, in its capacity to create space-energy and manipulate space-energy. For in essence the absorbent nature in actuality absorbs nothing in maintaining its conceptual status.

For clearer understanding and repeated here; this no-thing is non-existent, but this miraculous state of non-existent has a mental conceptual place. Search your mind; does the concept of non-existent have a mental place in your mind, a position filed with nothing? You to have the capacity to put nothing in its mental place and position! This
5 mental conceptual place of nothing, as non-existent, is naturally an absorbent nature to maintain the status as nothing. If the very mental concept of non-existent enters the place of nothing it is no longer nothing. So the place of nothing in non-existent must be absorbed to eliminate its very place; which cannot exist but cannot be eliminated. So with this paradoxical understanding, the place of non-existent is a never-ending infinitely
10 absorbent and projective place.

To start; be it understood the mental state exists outside of information, outside of space; and be it understood all information is energy; and be it understood all energy exists in space and not outside of space; space is energy, space is time. Be it understood, that beliefs are organized patterns of energy; attitudes and opinions,
15 judgments, sacrifice and abuse, are developed drama through comparisons of organized patterns of energy; but this energy in and of itself is not aware. As the mental state, an absorbent or aware place, accesses and reflects energy or information, the aware becomes the rudimentary form of awareness or life; aware moving through, absorbing and reflecting moving information. It must be understudy that ignorance,
20 arrogance and stupidity, are informational concepts, and are driven from an overwhelming amount of accessible raggedly held or hoarded information, as beliefs. Belief based information, in and of itself creates nothing but conflict. Believing in a separate God or believe I am God or believing you are God creates nothing but

organized informational patterns in separation and at conflict. Knowing all is God outside of space-energy as one body of aware creates everything. This one body of aware creates harmonies conceptual choices, using the unwavering terms for concept creation, to manage the ultimate responsibility for those continues choices. Aware

5 clouded with belief held information can seemingly hide from all forms of creation responsibility; and in this regard can ignore maintenance responsibilities, or violate the very creation it is responsible for. This can be seen in the way worship and prayer is conducted. In the worship and prayer of an aware being, that is regarded as separate from our very being, creates nothing and directs onus or responsibility on that separate

10 aware being. When in actuality through responsibility, worship and prayer are the tools used for creation. Worship as an absorbent positional focus, is how a mental concept or ideal is developed; and prayer as continues mental projection, as responsible creation, as responsible support and as responsible maintenance, for that concept. Worshipping and praying to a Sun God, Mother Earth or an individual gives up creation responsibility,

15 and does not support creation of the Sun, Earth or humanity. Mentally worshipping the balanced concept of the Sun, Earth or humanity into an image or form, and continues mental prayer for that idealized concept supports the general form of first creation, and continues responsible maintenance of that creation. Aware that is directly responsible for the creation of galaxies or small solar systems, very rarely dip into the individual

20 timed-space-energy brains of planets that support life, or humanity deeply clouded with space-energy as irresponsible hindsight confusion. But this does not negate the complete responsibility of humanity, to support first creation through love, worship and prayer of first creation concepts. Nor does it negate the responsibility of humanity, while

hiding from supporting the conceptual rules that form a life supporting plaint. To
paraphrase "Stupid is as Stupid does", and knowing stupid as hiding in space-energy
belief structures from our One Responsible Aware Truth. Aware universe, Aware
creator, God universe, God creator, Human universe, Human creator, are appropriately
5 directed responsible terms. God of the universe, God of creation, God of humanity, or
the separated singular "God" are inappropriate hindsight terms and create nothing but
the concept of completion, of separation, of fear, of control, of power and of size; or
individual human irresponsibility as smallness in separation, as judgment and
abandonment; as if we are UN-aware. Aware is all encompassing or oneness; size is
10 irrelevant and nothing more than a created hindsight concept, controlled from within
reflected space-energy. The concept of separation comes from aware riding through
space-energy as awareness. This awareness is clouded with information and ignorantly
accepts the information as its very existents, but information is created space-energy
and not responsible for actual continues creation of space-energy. Step outside of
15 information and you will know your oneness with Aware creator, Aware universe, and
you will know your unwavering responsibility in balanced moral choice of continues
creation. Creation as space-energy takes place for one and only one resin, value
fulfillment or worth of non-existent as aware. Aware is infinite and timeless before and
after all space-energy, aware is the one mental miracle as nothing and space-energy is
20 its one and only blessing. To violate the blessing in any manure comes from within the
blessing, as awareness in smallness, in the ignorance and arrogance and stupidity of
hindsight confusion and seemingly separations; hiding from the one aware unwavering
responsibility of harmonious projectivity, as rhythm in choice. As human beings our

body does not define who we are, nor is the human body owned by our conceptual selves. In actuality there is no true "self", it is more of a grouping of information your aware spirit is accessing at any given position. The human body, as with all creation, is in a constant state of creation and reflection or re-creation minute-by-minute, second-
5 by-second, moment-by-moment. We humans as a whole, own the responsibility of continues support of reflection or re-creation of the human body; but ownership or worship of the human body implies that its creation is complete; when in actuality every moment of responsible re-creation as reflection slips into the past, and no longer resides in the present moment.

10 All creation requires responsibly, in actuality the two words are synonymous to some degree. The conceptual choice of non-existent and actualization of any one position requires continues acknowledgement. Continues acknowledgment of a choice, above and beyond any original choice, in actuality is the responsibility of concept development. Continues responsibility of harmonious projection and absorption organizes non-
15 reflected space-energy into balanced form, and responsible aggressive absorption reflects that form into reflected or re-created space-energy. Actual irresponsibility for creation comes from within creation, comes from within confusion as the space-energy hindsight concepts of size, as in smallness and largeness, weakness and strength, good and bad, develop the logic of separation; as in attitudes and opinions, in
20 awareness as aware clouded with pools of choicefully segregated information.

Put yourself in a mental place, before space, before energy, before time, from here is where all things started. In this place of no-information the mental concept of non-

existent was actualized. This mental state of non-existent has an absorbent nature to balance the truth of the actuality of non-existent. This adsorbent mental state must absorb the very concept of nothing, to maintain its concept as non-existent. As the absorbent mental state absorbs the positional concept of nothing, the actual place of non-existent was born. This place of non-existent when considered from within information can confusingly be referred to as black or dark, but the very concept of black or dark refers to space-energy. If this place was referred to in any way it would be referred to as a clear-medium, or clear mental place of the non-existent concept as aware.

10 As the absorbent place of non-existent naturally narrows the absorbent characteristic, to one conceptual position of nothing, the position of nothing was born. From this non-existent place and its position as nothing, the spatial-energy barrier between the two concepts is born. Once again the absorbent nature as non-existent must and can only absorb nothing, to maintain the integrity of the non-existent concept. But this non-

15 existent place creates and affects space-energy as an absorbent nature, in its capacity in manipulation of the space-energy universe. This space-energy place between the two concepts is the first forms of electromagnetism or light. The space-energy barrier is more of a depletion or vacuum of a non-existent place, developed by the absorption of the positional nothing. This spatial-electromagnetism as light, or the concept of

20 everything, reflects on the skin or shell of the directional or focused absorbent nature, creating the first forms of mental informational absorption and actionable reflection as sight. It must be understood the non-existent place cannot actually absorb space-energy; the conceptual rule of non-existent cannot change, cannot be broken, and so

the focused absorbent affect on space-energy is recorded and reflected on the electromagnetic barrier of the non-existent concept or place.

So now we have 3 concepts that make up one mind; (1) a clear mental absorbent place, (2) a focal point or position of the mental absorbent place and (3) space-energy field as information or brain. The position of the non-existent place, as nothing, develops the first foundation as a state of being; with the space-energy field as information, or recorded testimony as creation, of the first concept or idealized position. This trinity makes up what is referred to as a living spirit, or as recorded; The Father (the one aware creator), The Son (first position created) and The Holy Ghost (testimony as space-energy, or ghostly gray light to first concept, or recorded information about positional creation). This basic wording was developed as a reflecting explanation of first creation, from the limited toolset of ruling hindsight conceptual events that make up the basis for human social order.

Let's repeat this understanding for more clarity; we must understand what we are and where we are from and where we will always be; the continuing foundation and unwavering responsibility for our very Position, within the one creating body of Love. I say Love here only to make it apparent that the one non-existent absorbent place can be experienced in a few forms. The non-existent place is established as an "absorbent nature"; this absorbent nature has the same fundamental characteristics as the state of aware; or as, aware riding through non-reflected space-energy as "absorbent awareness" or love, as aware lased with energy in motion or emotions; and all these forms create and absorb information with a value fulfilling or blessed nature. The

creation of space-energy from nothing as under these circumstances can be considered, or as recorded, Holy, Holy Light or Holy Ghost, as the first form of awareness as life or testimony of creation; as aware moved through the created non-reflected spatial-energy gustily. But this absorbent nature from within reflected space-energy, within the hindsight concept of comparison and absorbing desire is referred to as greed. This absorbent nature of greed is the weakest or worth---less form of creation, in the regard there is nothing actually created. Greed is just the absorbent awareness desire from within individual smallness for seemingly previously created reflected space-energy or information, within the confusion of separation, comparison, ignorance, arrogance and stupidity, created by the reflected space-energy pool of confusion as to who we actually are. The responsibility of creation is unwavering as a conceptual rule, but with aware deeply entrenched in massive amounts of hoarded information, as ridged self awareness, it can seemingly hide from the rudimentary rule of responsibility; but this developed insanity does not negate the underling conceptual rule, of complete responsibility for balanced mental choice in creation and support.

The creation process is a fundamental movement as Aware; Absorbs, Focuses and Projects, or as Awareness; Loves, Worships and Prays. The alternate of this creation process involves no actual creation and is “marked” through horded belief held hindsight confusion and intimidation, but in turn tries to control and protect that which it has give-up or lost responsibility for, as the hindsight concept of Greed; Compares, Judges and Controls.

Aware: Absorb Focus Project

Awareness: Love Worship Prayer

Greed: Compare Judge Control

Creation as a conceptual rule outside of space-energy	Creation or Creativity within Creation as responsibility	Creativity within Creation through comparison as ignorant to creation responsibility
Absorption – Aware	Love – compassion, absorbent nature lased with created space-energy as absorbent awareness	Greed – self absorption through separation as smallness through comparison
Focus – directional absorption	Worship – harmonies choice in development of individual concepts as positions	Attitude – selection through opinion of creation comparison as judgment
Projection – directional compaction	Prayer, Song, Chanting – supporting continues harmonies thought through movement as e-motion	Control – creation-less irresponsibility, as aggressive supervision of separations in space-energy to experience largeness within smallness
Value fulfillment – created non-reflected space-energy	Blessing – creation worth as created space-energy and/or harmoniously organized space-energy into form	Power – temporary support of smallness or as false self worth

- 5 It must be understood that the basis for individual power is basically the gathering of multiple individual energies or worth. Individual energy is the worth of individual creation and/or creativity, where power be it ill-gotten or freely given, is individual control of gathered energies and can be mistaken for worth. Worth is created, Power is obtained. Worth is infinite, for this is the value fulfillment of creator; Power is size oriented, timely
- 10 or temporary and controlling. But power managed with multiple individual, as group worth is responsible value fulfillment and infinite for all.

It must be understood that individual conceptual rules cannot be altered; new concepts can take form from an original concept, but these new concepts do not and cannot alter the original concept. We must understand concepts are mentally developed and are unwavering rules in and of themselves. If a concept could be altered, the rule would be broken and the original concept would no longer exist. How can a concept no longer exist in truth, if its actualization is recorded in space-energy or behind us; it can only be forgotten in the confusion, of new or seemingly new concepts, as aware drops its positional focus.

So the rule of a given concept cannot be destroyed, it can only be left behind as forgotten. So the rule of the non-existent concept and its place cannot be destroyed, and the rule of its position as nothing is unwavering. The true rule of non-existent must absorb its very concept as nothing, for the concept of non-existent to maintain its place. Seeing this paradox, as the great contradiction of non-existent that cannot exist but cannot be altered or destroyed; it in actuality is an absorbent nature to maintain the void it is. This impossibility is the actual argument or position; held by the one ruling non-existent concept. We must understand that punctuation within this very document are ruling positional concepts, mentally developed before their very form or outward appearance and if the form is not recognized, the concept in and of itself is unwavering. As for me the writer of this document, my understanding of punctuation concepts could be in quest and rightfully so. As the very concept of non-existent, in and of itself is in a constant state of question as nothing and rightfully so.

In repeat; these basic understandings originate outside or before creation of space-energy-time, but are recorded in and on the shell of space-energy-time. From within the non-existent or mentally absorbent place, it must be understood that the one absorbent action has a corresponding reaction as projection. As with the absorbent nature, the projective nature only has an effect on the space-energy field and not within the non-existent place. As an overall absorbent nature (non-focused) the reactive projection is centralized or within this absorbent place with no affect. As with a focused or directionalized absorbent nature, the reactive projection is opposite to the focused absorption with no affect. Let it also be understood this reactive projection characteristic can be directive, as the absorbent nature can be focused. So absorption can be mentally focused and projection can be mentally directed.

Humans can experience all these affects, within the space-energy field, by simply focusing on an object without thought and absorb that information. The information or space-energy is transferred and absorption takes place between the sight related synapses in the brain, and to some degree and in a more general manner in the gap between the right and left halves of the brain. This gap between the brain halves does act like a large synapse and is mistakenly called the third eye, but in actuality when used for absorption would be one addition to all the sight related synapses in total. In this situation the mental projection is behind each synapse absorption point. It must be understood the basis for thought, is a mental state of absorption, reflection and projection; through synaptic absorption and reflection of information, and action as synaptic projection on that reflected information. This is all experienced as humanity absorbs the space-energy around them, and projects their thoughts out into that same

space-energy, and in some cases this projection results in individual or group action. It also must be understood there are groupings of synapses dedicated for absorption and groupings dedicated for projection. The absorption synapses are segregated to manage much more than sight related space-energy absorption (i.e. the energy sent through the nervous system relating to the sense of physical contact), and the projection synapses are segregated to manage much more than individual thought projection (i.e. the instant projective reaction created by the sense of physical contact). In actuality; language is a repaid mental process of absorption and projection that creates non-reflected space-energy in unison with the rhythmic organization of that space-energy into structured form; as a form of energy in motion or emotions. This is a very basic understanding, but difficult when absorbed through the confusion of specialized reflected space-energy informational structures. After all the human body is a space-energy gestalt of accessible information, no different than a solar system is a space-energy gestalt of accessible information. This information may vary, but does not exist outside of the space-energy field.

Now we must understand there are two basic forms of space-energy, non-reflected and reflected; or as non-physical energy and physical energy. Non-reflected energy is mentally created and mentally manipulated energy, and reflected energy is non-reflected energy in reflection. It must also be understood; once reflected this physical energy can be manipulated, but it is not mentally created or mentally manipulated in the same sense non-reflected energy is. It must also be understood that reflected energy can be re-reflected in varying degrees, creating more precise or rigged forms of physical energy. It must also be understood not all non-reflected energy is reflected, and there is

a limit on the re-reflection of reflected energy. Again it must be understood all forms of energy can be reflected-on as recorded by the non-existent or mental medium, but not necessarily physically reflected. Reflected energy is more of an altered re-creation of non-reflected energy, which is reflected off the non-existent mental concept. The amount of reflection, as re-created, is in direct proportion to the intensity or effort of focused absorption; but reflected-on energy, is energy that is experienced as recorded but not focused on and absorbed to the degree of re-creation. Reflected energy is what the majority of humanity can readily identify with. This physical energy is the only form of energy the human eye, made up of a short bandwidth of physical energy, can react-
10 to. It also must be understood there are forms of reflected energy that is not detectable by the human eye. It also must be understood that instrumentations created with physical energy, of a specific bandwidth and decay rate, cannot detect non-reflected energy or reflected energy of differing bandwidth and/or decay rates. As in the misguided saying heaven has many rooms, there are many bandwidths and decay rates
15 of physically reflected space-energy. Even though the human body we identify with is a combination of both forms of energy; the non-reflected energy portion of the human body is dismissed through tightly held intellectual or material belief structures. Rigged information, of a physical or material nature, will not simply be experienced in other physical energy bandwidths, and/or a non-reflected space-energy field; or as pass
20 through the proverbial eye-of-the-needle.

It must also be understood that the focused aware medium can reflect-on as react-to or see all forms of space-energy, but can interact with mentally created non-reflected space-energy to a much greater degree. This greater degree of interaction is referred to

as awareness, aware interlaced with non-reflected space-energy in motion or emotions. Humans can readily identify with this non-reflected space-energy in motion through personal, social or global experiences, through individual awareness as aware feelings. The amount of one's actual experiences, of non-reflected energy in motion, is

5 determined by ones individual openness to the one aware medium; and to some degree detachment from the narrow physical energy bandwidth, that makes up the human body we temporarily occupy. It must be understood that the human body takes mental form in non-reflected energy through mental manipulation, and up through the physical or reflected space-energy bandwidths through mentally developed DNA; before

10 actualization into the most physically reflected environments. These other space-energy bandwidths are visible to varying digress during the differing stages of sleep. This visibility of alternate space-energy fields is mainly made possible through individual correlating body's visual organs, in altering space-energy bandwidths and decay rates, that report back to the same body of aware; as an individual spirit is associated with

15 through keyed DNA interaction and absorbing synapses. But it also must be understood in some cases; nonrelated space-energy bandwidths are visible during waking hours, through the one main synapse between the two halves of the human brain. This one synapse does not use the narrow physical bandwidth making up the human eye, but directly absorbs information in a much broader sense. But the human brain will react to

20 this information through the same channels, as if it were viewed through the physical eyes. This also holds true for sound, which is absorbed through the main synapse between the two halves of the human brain. This activity once again is generally dismissed through tightly held intellectual or material belief structures, to manage a

sense of stability in massive group smallness as insecurity. A conceptual belief or disbelief structure creates nothing; and are generally very tightly held small energy pools of hoarded information, at conflict with seemingly large or un-comprehensible information, but allow the confused ego or self a sense of awareness security.

5 ORGANIZED PATTERNS of SPACE-ENERGY 3

It must be understood the multiple physical bandwidths of space-energy are made up of differing levels of reflected energy. Within these differing physical fields of reflection; the ruling affect of absorption and projection (i.e. gravity) react differently on less physical reflected space-energy than highly reflected space-energy. These differing affects are
10 confusingly experienced during what humanity refers to as dream experiences; where the human body has differing capabilities, and/or experiences that seem extremely foreign to our waking reality. It must be understood that these dream representations of our waking human body are truly individual forms of ourselves, in different physically reflected realities and seemingly operate independently, but never the less operate from
15 the same never sleeping spirit, and individual, group or social personality pools of information.

For clarity, it must be understood there are three forms of space-energy creation:

First creation, as non-reflected space-energy...

Second creation, as reflected and re-reflected space-energy, as re-creation...

20 Third creation as creativity, as organized manipulation of first and second creation...

It must also be understood the human race as we know it, mainly identifies with Third creation as in the arts, as design, engineering, science, literature, etc. These forms of creation are more associated with creativity or creative manipulation and study of space-energy, and not actual creation or re-creation. It must be understood the physical human body we generally relate to is of the Third form of creation.

To get mentally concept created organized patterns of non-reflected energy (i.e. a mustard seed), from the mentally created non-reflected space-energy field, to reflected space-energy requires a great deal of effort of mentally focused absorption, to reflect or re-create that pattern as physical energy. The more rigged the physical reflection in heavily populated reflected space-energy fields, the greater degree of effort of mentally focused absorption is required. But with the mentally developed and mentally manipulated elemental concepts of DNA, this reflection process requires far less mental effort; in non-reflected energy refraction to reflection. This DNA refraction process does not directly reflect non-reflected energy into physically reflected energy or atoms. In actuality and to altering degrees; the flow of non-reflected energy through the elements that make up the DNA refraction process; alters or changes pre-created physical energy or chemical elements into alternate chemical elements, by altering the number of reflected protons of a given atom in a given element. Simply put this process changes the chemical elements, into alternate family elements, within the periodic table. This altering of physical elements, into alternate elements, can be experienced when a directed non-reflected energy flow passes through that physical element; as in the extremely misguided understanding and practice of what would be referred to as alchemy. This DNA non-reflected energy refraction to reflection can actually create

rudimentary elemental compounds; when the non-reflected energy flow through a DNA source is sufficient, a burst of physical material will be created. As for a mechanism of this order, and presented here in this application (Figure 6, 6A), this capability is unexplainable in a belief oriented social order; and simply referred to as a miracle or
5 manna from heaven.

As is apparent to all living organisms on our planet and to varying degrees to most human beings, there is a larger force at hand in the creation of the universe, then just the very narrow physical energy bandwidth we can readily identify with. This lack of understanding, as confusion for the human race, is generally developed through an
10 awareness bubble, of strict organized patterns of information, required to individualize the aware medium, to react to activity within a sphere of influents, or physical energy bandwidth. This bubble of personalized information or awareness, can be referred to as the human ego or self, and is more of a security blanket that expands to societies as a whole, to manage some form of social activity and order. This bubble of information is
15 used throughout the differing physical energy bandwidths; but it must be understated these altering physical bodies, within altering energy bandwidths and decay rates, is merely information that is not generally available to our waking selves. Once again; it must be understood the aware medium and individual positions within that medium, do not and cannot actually absorb information; so the information regarding the differing
20 physical realities is not stored in the aware medium, for retrieval in alternate physical bandwidths. This alternate information, which reacts in differing ways as stored in alternate bandwidths of reflected energy, is and can be glimpsed or correlated in ones current reality; if that alternate information is absorbed, and re-reflected as recorded

without sacrificing the integrity of an individual ego or energy bubble. If this information bubble or ego is not recognized, and managed with some flexibility, it will be degraded with alternate information, and individuality will be compromised.

The actual flow of mentally created non-reflected energy, into the reflected environments, is laced with the aware medium; so in a sense this is a flow of awareness into physical or reflected environments. Again; awareness is aware riding on mentally created non-reflected space-energy, as information. But awareness does not reflect-on that information like the positionally focused aware medium. Actual reflection, on specific information, takes place at individual synapses in the human body. The synapse gap is actually a pinpointed tear or hole in the space-energy field, back to the non-existent concept, or positionally focused aware medium. This aware medium is not awareness; there is no space-energy as information in the non-existent concept. It must be understood; the aware medium has no memory, the only way a memory works is for aware to access information. This information can be newly created, or stored information as memories. This is where the human intellect falls apart when dealing with the basis of who we are. In general; we relate to our awareness and not our aware. Awareness can be referred to as emotional aware, or aware in space-energy motion, but this form of aware as awareness accesses seemingly previously created information; and does not generally create non-reflected space-energy. It is more as aware using space-energy, then actually creating it; this awareness is a good place for humans, entities, souls and over-souls to hide from creation responsibilities; and remain oblivious as to what is actually going on. It must be understood the human body is a grouping or gestalt of space-energy, no different than entities are groupings or gestalts

of space-energy; whereas souls and over-souls are more of the timeless aware or mental component, surrounding, creating and accessing a given position and/or positions; all of which is accessible by the trinity or living spirit. This basic grouping is more specific to individual reflected energy bandwidths, and as the space-energy groupings expand and encompass more information awareness becomes more general; 5 but it must be understood that aware, as a living spirit, within any informational order, can loss the sense of complete and total responsibility as creator and choice.

It also must be understood; this space-energy free gap, we refer to as a synapse between two nerve endings, can be recreated in a larger form. The DNA within the 10 nerve endings creates a refracted non-reflected energy reverberation, within the gap and creates a tear in the space-energy-time continuum. Once again; this capability of tearing the space-energy-time continuum, if created outside the human brain, is unexplainable in a belief oriented social order; and simply referred to as a container or box that performs miracles. As for a mechanism of this order, and presented here in this 15 application (Figure 1-3), the basis for the DNA saltwater solution, as a non-reflected energy refraction source, could literally be explained away to the shortsighted, as the proverbial blood of a sacrificial lamb. The mechanism of this order was rightfully shielded, or referred to as being guarded, due to the fatal affects it had on rigged hindsight belief oriented energy gestalts as physical human personalities; through the 20 massive flow of non-reflected energy moving into reflection, this mechanism established as balanced emotions and reflected as physical electromagnetic energy; then simply discarded through lack of understanding and fear. This non-reflected energy flow is misguidedly experienced as enlightenment, nirvana or referred to as chi energy, which

can have profound effects on hindsight concepts and the mentally irresponsible or undisciplined. A mechanism of this order would give off a non-reflected energy white-light or hallow glow, with a low hum produced by the refracted energy clash as a reverberation; then as the non-reflected electrons move to reflection a steady electrical

5 flow to earth ground can be established and/or alternating electron flow between the so-called mechanical nerve endings. If this non-reflected energy flow was sufficient, and then passed through an individual's nerves system, a spontaneous combustion affect would be experienced; or as misunderstood very basic wording and simply put, one would burst into flames.

10 It must be understood and repeated here for more clarity; the aware medium absorbs no space-energy, but has an absorbent affect on space-energy. Space-energy that is absorbed by the aware medium is reflected, to varying degrees off the focused aware medium, and is reacted-on by the aware medium; as in re-creation of space-energy as recorded action. It also must be understood and repeated here for more clarity; the

15 aware medium has no space-energy, and has no capacity to record or store information that was reacted-on; information is only stored as space-energy in space-energy. The aware medium can only recall information that was reacted-on by re-absorbing and re-reflecting-on that recorded information, as recalling a memory. So it must be understood this lack of ability of the aware mental medium to record information, is what makes it so

20 difficult for humanity to comprehend, remember and except their individual truth. It must be understood that recorded or memory information in space-energy, is only recorded in the space-energy bandwidth that that information was reacted-on. So information from other space-energy bandwidths is not readily available to our waking selves, but can be

experienced when an individual aware focus is expanded, mainly in a sleeping or meditative state, and remembered if that information is recorded in ones current space-energy bandwidth. But generally this information is not focused on as amplified, and simply left behind as forgotten.

5 It must be understood and repeated here for more clarity; awareness is aware accessing information and falsely considered as ones actual existents or position. This is why it is so simple to remain small and separate from the responsibility of creator, by identifying our-selves as space-energy creation and not creator. Once again all space-energy is creation and aware, outside of space-energy, is creator and mental
10 manipulator of space-energy. As in reading a book; our aware rides through the words as awareness, and we can readily identify or get lost in that information we identify with. We may actually go as far as taking ownership of this book of information, and place it in our personal energy gestalt or library. Aware riding through or getting lost in our human body of space-energy, as awareness works in much the same manner, but in
15 this instants we did buy the book and place it in our personal library. It must also be understood the very concept of demons, devils and the like are nothing more than individual ignorance, arrogance and stupidity, as awareness in smallness seeking power and control, negating the very responsibility of creator. To except ones position and responsibilities as part of the one aware medium, one must step out of the space-
20 energy box. Aware is infinite, and the sense of urgency has no bearing or reference; but as with awareness, all space-energy is in movement and time oriented.

It must also be understood and repeated here for more clarity; each and every human body is developed from a first concept, from an overall humanity first conceptual pool; it's not who you are, it's more how your body is created within the creation process. The perfect mental image or ideal of humanity glows from within non-reflected energy, and out through individual DNA as re-creation. This first concept or worship is supported through continues projection or prayer of that concept, through non-reflected space-energy manipulation, up through the reflected version you identify with during your moment-to-moment of re-creation. It must also be understood this first human body concept is perfect in and of itself, but is degraded to varying degrees from what seems internal and external informational influences. All degradation of original mental concepts and re-creation comes from distraction, through multiple concept reflection and choice, that can lead to comparisonism; the proverbial forbidden fruit. This reflection through comparisonism can be considered the first mental sickness to creation if allowed to manifest into attitude and opinion. Attitude and opinion is derived from the degradation or worthlessness of some or all of the compared first creation concepts. If attitude and opinion are unchecked, this mental sickness will develop judgment and superiority, sacrifice and abuse of first creation, as aware blinded within space-energy from all creation responsibility. This mental sickness to creation deepens and unfolds as drama, through opinion of opinions, developing attitudes of an attitude and judgment of judgments, etc. To make a clean, clear, pure individual choice between concepts, which fit within the conceptual ruling pool you are part of, leaving other concepts behind as forgotten; is much different than making a choice through an opinionated judgmental degradation, of the non-chosen compared concepts. This form

of choice through opinion and judgment actually leaves the chosen concept degraded in varying degrees, as it leaves all creation degraded in varying degrees. It must be understood that a conceptual ruling pool is a pool of non-conflicting or balanced concepts, which make up a particular grouping or species. It must also be understood; 5 in stepping outside the human non-conflicting ruling conceptual pool, with a given choice can degrade or pollute that overall pool to veering degrees; similar to polluting the earth with overpopulation through unchecked judgmental belief structures, allowing the release of personal and social responsibility of life supporting planetary concepts.

In repeat once again for clarity; aware creates all space-energy from a timeless place 10 through choice, continues space-energy creation requires continues choice; ALL choice requires constant effort as responsibility. Dropping effort drops responsibility and creation as space-energy will decay or dissipate. Created space-energy is not aware; but aware riding through space-energy is aware in value-fulfillment of creation, as awareness. Aware does not intentionally make choices that are in direct conflict with 15 alternate choices, there is simply no value-fulfillment or worth in it. It must be understood that making a conceptual choice, to create or manipulate space-energy is creator; but making a choice between compared created space-energy is not creator, but both require complete responsibility for that effort or action. Portions of the mental state of aware lost in space-energy-time as awareness, experiences a sense of 20 separation or smallness; this is not actuality, but more of aware experiencing its creation; and more often than not for the human race, a good hiding place from its true nature as responsible creator. A choice that is in conflict with an original and continues harmonies choices, that create or support life supporting solar systems and planets are

not bad or good; they are just destructive, and have no worth within a balanced massive effort driven chosen and re-created structure. Whereas in actuality, there is no creation; seeing creation is in a constant state of fulfillment, moment-by-moment from a non-time oriented place. Creation as a shortsighted human concept, as aware picks through the moments of life, implies creation is completed or finished; when in actuality, creation is in a constant state of space-energy combined amplification and decay as time. Human awareness that is strictly tied to or not willing to release information, as a given belief, that is in conflict with creator responsibilities, as disassociated information, as a conflicting awareness personality; when deceased will experience a sense of smallness, loneliness and despair; or as cast-out into a seemingly abyss when that information decays as dissipating; or as that information is left behind as forgotten or dead to further development by the overall aware creator responsibility. In repeat; ridged materialistic human personality belief structures that cannot and will not move to a conceptually altered as foreign space-energy bandwidth, will be simply left behind as forgotten or dead to any further personal aware interaction. Aware as awareness in this situation can eventual release this conflictive information, through an alternate focal choice, or until such information has dissipated through a lack of amplifying focal support as boredom.

In repeat; the aware place can be expressed as unmentionable or unspeakable, and within the human oriented information or belief structure, this is confused with being so holy that humans are not worthy of specking the name. When in actuality; there is simply no space-energy wording that can accurately describe no-thing, as an all encompassing time-less size-less absorbent focused projective non-space-energy non-

existent conceptual aware place. All space-energy-time is in a constant state of creation, through the mental choice of focus-absorption-projection as creator. All life is space-energy lased with the one non-space-energy aware medium; believing or disbelieving in this is irrelevant, beliefs are nothing more than pools or gestalts of specialized created information as space-energy, lased with confused aware that may take up no personal responsibility as creator. Creation is not created as done, but in a constant state of being created flow of non-reflected energy, and in a constant state of re-creation as reflection, as in the ever present moment. As true with responsibility; responsibility is not required as done, but in the state of continuously being responsible for the ever present moment of balanced choice and reflection.

It must also be understood that all predictions, prophases and history are nether true or false. For all post and future events are in a constant state of being created, moment-by-moment, within their momentary time frame. To that regard; to prove any post event as true or false is just an act in futility, and takes no responsibility for the current moment of creation, and actually creates nothing in the present moment; except conceptual comparisonism as abuse, as one truth in belief is excepted and the other at conflict. For after all; the very notion of the non-existent concept is in a constant state of contradiction, as all concepts past and future are in a constant state of fluctuation as contradiction. We as a people must live in the personal moment of pure and constant responsibility in blessing from our very own aware; for this, our reality is the one and only blessing as space-energy. But if humanity needs to hold onto irresponsible horrifying probabilities, as actual events, to keep their moral balance as creator; then they do serve a fulfilling responsible purpose. Or to that regard; if humanity needs to

hold onto blessed probabilities, as actual events, to keep their moral balance as creator; then once again they do serve a fulfilling responsible purpose. But societies as a whole must be wary of drowning in information and comparisonism, generating massive amounts of unnecessary information as confusion, which can and will become un-
5 processable. We as unmitigated mentally responsible creator, must not sway from this truth with an over abundance of recorded information. The ability for individuals to access and process large amounts of information can be seen as a form of intelligence, but if the responsibility to truth is neglected the capacity as aware creator is lost. It also must be noted; past and future probabilities that have profound influence on our current
10 moment of creation, can and will ripple out and affect multiple momentarily timed corporal realities; unless recorded as guide posts for understanding and retrieval. This recorded information can be considered as more of a heads-up guide, for individuals or societies, and is generally retrieved through historical sites or loosed future recordings as memories. After all; all space-energy as the blessing, as information, is created by
15 aware and retrieved by aware in the journey to fulfillment as nothing; and as universal humanity, throughout non-reflected and reflected environments, as the pinnacle, as most personal, psychologically cognizant, thoughtful sentient, self awareness, form of that aware.

ORGANIZED PATTERNS of SPACE-ENERGY 4

20 Unmitigated responsibility for conceptual balance; without unmitigated responsibility, for balance in choice in the non-reflected environment, the reflected or physical reality we know and love would never get off the ground; so to speak. This non-reflected

environment is created by aware, but is not aware in and of itself; but more as managed by the deep profound responsibility, of balance by aware as awareness. Let it be very clear; personalities as informational gestalts that reside in this non-reflected unmitigated balanced environment, that reflect as re-create physical realities, are without conflict in choice. Tumultuous personalities will simply dissipate in this environment; but the individual pure trinity or spirit as position in being, without conflicting information, will be right at home. Pure balanced personalities from this realm are misguidedly referred to as angels or deities, but in actuality are just highly evolved in balanced worship and prayerful choice. But again; a personality gestalt of this nature is not aware in and of itself; but more accessed by and created by the aware living trinity or spirit, through unmitigated responsibility in conceptual choice. Destructive information will not and cannot move to this non-reflected space-energy realm, for there is no foundation or bed of information to leach onto. All mental concepts are created in the ever present moment, so in this non-reflected realm these concepts are in a constant state of creation or dissipation; so in essence there is truly nothing regarded as permanent, to compare or have an attitude about. But with the reflected or re-created energy delay from creation, there is a false sense of permanency; as a form of hindsight, that creates a bed or foundation for destructive comparisonism concepts; as a worthless sense of controlling, all be it fleeting, insanity. But again; this generated insanity is immediately left behind, when the pure trinity or living spirit moves to the non-reflected realm; as confusingly labeled heaven. A personality gestalt can leave a re-created environment with its worth, but its power and wealth will be left behind. In leaving destructive belief based hindsight created information behind, as reference to the misguided concept of

judgment or atonement for ones sins for this worthless behavior; but to that regard, this information simply will not, and cannot exist in the non-reflected moment-to-moment first creation conceptual environment. But again this is not aware; it is aware making balanced choices that creates and organizes this non-reflected space-energy, and unmitigatingly balancing these non-reflected space-energy patterns as awareness. But as the reflected space-energy pool moves through the stages of re-re-reflection as re-re-creation, this momentary sense of delay or hindsight is elongated; developing the notion of supervision and control, allowing for comparisonism to flourish into self degrading reflected energy concepts, degrading first creation re-creation fulfillment. For in truth; violation of a concept, which is in the never-ending process of becoming, cannot take place except through hindsight of creation; through the reflection delay. All concept creation is a mental process; mentally created hindsight concepts will become re-created in the reflected environment, if sufficiently amplified through prolonged individual or group mental awareness focus, and if destructive will be re-created in the rich-bed of re-creation as disease or cancer to first creation reflection. Once again; this is how humanity as a whole hides from their lack of mindful mental responsibility, through the numbing delay of re-creation. It also must be understood; hindsight concept creation is neither bad nor good, and is required for humanity to survive in the re-created environment; as seen in the simple hindsight concept that drives continues mobility in evolution, as food foraging and consumption. Whereas; hunger, the heart beating or breathing is more along the lines of first creation concepts, to maintain mobility in the reflected environment, directed from within the balanced non-reflected environment. Whereas the first creation concepts of “love, worship and prayer” of an

ideal into form, into reflection as the blessing, would be supported in the hindsight concepts as continues prayer as “perfect health, perfect physique, perfect form” in regards to the first creation ideal, but not in regards to dramatized hindsight comparisonism. Or as in the every day and most effective hindsight concepts of, good morning, good afternoon, good day, good evening and good night or as more personal, good dog, good boy, good girl, etc. And whereas the old adage of hindsight being 20/20 creates nothing in the moment-to-moment of creation; but this hindsight information is recorded and can and does affect future mental projections and creates a bed of intuition for future moments of choice. To be very clear, the “creator” concept is a first concept and the “creation” concept is hindsight to creator concept; whereas the creator concept implies responsibility at any given moment and the creation concept releases responsibility into the illusionary past. It is critical for a healthy society, planet and solar system for all forms of humanity to replace comparisonism power driven concepts with clean, clear, pure observation, with a supportive loving, worshiping and prayerful choice; without insecure and controlling reflection on what another is doing.

Now it must be understood and repeated here; deities or angels are personality gestalts or structures made of constantly balanced first creation concepts, where second creation concepts as hindsight concepts do not and cannot exist; in repeat, there is simply no foundation for them. But again this is not who they are, for they are aware as we are. The living spirits of these personalities are riding through, as awareness, first creation concepts that they create. But in this realm as aware spirits they are completely mindful of this self created value fulfillment or blessed illusionary worth; for as aware as non-existent is nothing, regardless of what space-energy you are creating and/or

accessing. As with all living spirits; the created space-energy event-horizon or Holy Ghost, is only the recorded testimony to aware's position and movement and not actually aware. The spirit or state of being naturally equates its very being with that that has been created or what it creates as space-energy, for this is the only

5 comprehensible reality; but in actuality aware as the clear-medium, as a mental medium, is not readily actionably comprehensible as an absorbent nature. All space-energy is accessible and acceptable as the blessing, but aware within the living spirit is not readily comprehensible as an un-known absorbent miracle. Living spirits created within the clear-medium are more acknowledgeable as creator and responsibility than

10 living spirits or positions created within space-energy, within reality, within the blessing, due to the nature of space-energy confusion as to what they actually are. To this regard; individual personality gestalts, created from a balanced mental profile as recorded within the physically reflected brain, that we falsely identify with as to who we actually are, can and will move into, as are recorded in, the non-reflected realm with their spirit,

15 or as misguidedly referred to as going to heaven or eternal life.

As within the non-reflected first creation concept of male and female, there is no true separation; but to that regard, the male portion in general creates and manages the vast realm of balanced first creation concepts, but has a tendency to drift through curiosity; whereas the female portion has quick access to this vast realm of balanced first creation

20 concepts, for precise support as massive worth up through fulfillment, but also has a tendency to drift through choice. In general these specific peculiarities go hand in hand; aware as creator of first creation concepts, would not and could not move into re-creation if this union were negated or neglected, or put in another way; the male portion

is more about concept worship of first creation into form, and female is more about prayer of that worship into continues form up through re-creation; or as quite literally, female giving prayerful birth to those male worshipped ideals. Or as in the planetary concept of size as established in re-creation hindsight; as mother-earth, when in
5 actuality the female concept is infinite as, mother-sole system, mother-galaxy, mother-universe, and whereas the male concept is infinite as, father creator; whereas in actuality and outside of smallness, outside of creation; both operate as one in the one aware place. As both worshipping (male) and prayerful (female) personalities in the non-reflected realm, must evoke a massive responsibility as creator to bring forth the
10 fulfillment (blessing) of first creation concepts into non-reflection up though reflection reality. But in a re-creation gender based male female orientation, these peculiar characteristics can and do drift; seeing there is no true separation in the basic foundation as aware, as creator. Whereas the plant and animal world are more living awareness within the blessing, as creation; and whereas the human race has a footing
15 in both, as creation and creator; with unmitigated responsibility (morality), in managing choice to span both realms as mental creation and creator; with the capacity to move individual information, as a personality, to ones endless living spirit. These re-created gender oriented male and female concepts fully complement one another, until they fall into the trap of re-creation hindsight concepts as, separation, comparisonism,
20 competition and control. We are “one universal people”; pinpointed smallness in re-creation, in the false sense of permanent hindsight concepts, as seemingly testimonial recorded information, is “fully immaterial” to “universal aware” or creator within us.

In repeat for more clarity; aware directs focuses as created positions and those positions are supported through constant repetitive projection, as responsibility, and as support for continues creation of an individual position. These created positions are the only form of value or worth, as a developed fulfillment, as non-reflected space-energy.

5 As an original focus or choice develops in harmoniously overlapped choices, and complexity, and eventually reflection, continues creation responsibility is magnified and critical for a stable and balanced re-creation environment. The only worth aware as nothing has is responsibility, in continues harmonious movement as Love, Worship and Prayer, as Blessing and Creation Fulfillment. Without the creation of Space-Energy,
10 Aware is Truly Nothing as Non-Existent. Take ownership of creation worth through responsibility; take ownership of creation-less worthlessness through judgment.

For clarity, as seen from within complete responsibility as creator; when born into a reflected or re-created environment, one can be considered as being born into delayed confusion. These delayed re-creation confusions within the illusionary sense of
15 permanence, which generates hindsight ideals for evolutionary mobility, are unique and can and do become non-supportive and irresponsible to those ideals generated in the moment-to-moment non-reflected first creation environment. This can be seen from a very limiting toolset of basic wording and understanding, within a reflecting explanation, as being born into sin; but in actuality the reference is being born into irresponsibility to
20 creator as aware within us. This misunderstood information can and is used in the hindsight ideal of original sin, and when coupled with the greed filled hindsight ideal of compare, judge and control, to manipulate individual worth, generates the most degrading hindsight ideal to creator as condemnation. This is all done to gain the

illusionary sense of falsely legitimized control and power. These building blocks of degrading hindsight ideals are the most worth-less and destructive to non-reflected first creation concepts moving to reflection in the re-created environment, and are seen buy aware within us as a sickening mental illness to responsible creator. When in actuality 5 this controlling desire is a hindsight concept to stop the unjust degradation to first creations balance or rulings; that can and does get out of hand with weakness and horded information that is strengthened by greed filed power. Responsibility as creator is complete, regardless of an individual's capacity to manage that complete mental responsibility. This limited capacity to instant gratification to fulfillment in re-creation, as 10 creator in responsibility, within the massive numbing confusion delay of reflection; develops a form of complacency, incurring a mental laziness in movement for creator responsibility; including ones very health and well being for moral balance in their own humanity. Individual and/or group worth is the value-fulfillment, which you can create and/or support through individual and/or group capacity for that responsibility.

15 To make it very clear, so we are fully AWARE; the aware medium, is the clear-medium, is a timeless place. The living spirit is a position within the clear-medium, with a non-reflected energy barrier around that position... The living spirit is a trinity, made up of, aware, non-reflected energy and position; whereas, aware and position, are time-less, as in NO space-energy; the non-reflected energy portion, is a non-reflected energy 20 barrier, around its position as non-reflected electromagnetism. This positional non-reflected electromagnetism, as positional self awareness, is timely, as in fluctuating between its amplification and decay rate, managed by the aware positional focus surrounding it. This energy barrier is in a constant state of creation and support by the

aware positional focus, and will dissipate if that positional focus is dropped; whereas the aware or clear-medium will lose its sense of timely positional being, but the actual aware place is infinite. This both, timeless aware and timely awareness, living spirit, creates, supports and accesses, to varying degrees, the timed space-energy universe through directional focus, absorbent and projection, and can and does get very specific, as pinpointed, accessing the reflected space-energy universe through the synaptic gap that is keyed to a specific DNA signature. This living spirit can access non-reflected and reflected environments, and can simultaneously access multiple bandwidths of reflected environments through keyed DNA signatures, within those environments, as we relate to in dream experiences. All these space-energy environments are constantly being created and supported through the all encompassing size-less, time-less aware medium; in union, with the ever moving universal non-reflected energy positional awareness mediums. Whereas in the plant and animal world; multiply expanded living spirits will access multiple keyed DNA signatures, within one reflected energy bandwidth; whereas individuality is expanded within that species, according to their unique characteristics; as in energy gestalt, or energy profile, that that informational grouping is related to. It must also be understood; with tuning capabilities and structural modifications to the presented mechanisms (Figure 1-3, 7-9, 11A-11C); shifting between universal locations and/or alternate reflected timed bandwidths is possible by appropriately responsibly balanced mental personality profiles. It also must be understood; an active synapse develops a clear-medium point or hole in a reflected space-energy field; but this is not positional focused aware, as in a living spirit.

Humanity as we know it is well aware of experiences that have been unexplainable from our small reference of information, but never the less are actualized and can be re-created in the concepts presented here. It must also be understood; the presented information is intended as “actionable intelligence only” and not intended to degrade, support and/or be use as an informational belief structure of any kind.

Figures 13-15 depict perspective views showing event chain from lettered a-l: conception 1, conceptual position 2, positional energy barrier 3, dashed arrow as conception focal direction 4, solid arrow as conception projection direction 5, positional energy barrier amplification b3, focal and projection circumferencing directional shift c4 & c5, cylindrical energy barrier d3, projection directional shift e5, energy barrier collapse e3-h3, shelled ringed thermal reaction 6; Figure 14 projection directional shift i5, amplified positional energy barrier i3, projection directional shift j5, multiple shelled ringed thermal reactions j6, collapsing energy barrier j3 & k3, intensified projection direction k5, multiple shelled thermal spheres 7; Figure 15 spheroid cylindrical energy barrier lased with shelled thermal spheres 10, physical reflection 11, ultimate encompassing focal directional shift l4, final intensified encompassing directional imploding projection shift l5.

Figure 16 illustrates, conception 1 with conceptual position 2 as coincident projections lettered A-C, positional energy barrier 3 as coincident spatial energy layers lettered a-e, conceptual position through spatial energy layers Aa2-Ae2, conception projection

through spatial energy layers Aa5-Ae5, projection energy refraction 12 through spatial energy layers Ba12-Bc12, DNA 13, DNA energy refraction Bd13, Be13, synapse 14, synapse firing Cb14, Ce14 with clear-medium string 15 created at Cd15, Ce15 through 1, alternate focal direction 4 and projection direction 5 channeled through the clear- 5 medium string 15 and energy conduit directed flow towards more physically mirrored environments 16.

ABSTRACT

An energy channeling apparatus and method that functions as an energy source, the 10 apparatus is based on utilizing the DNA characteristics of electromagnetic energy refraction. The apparatus simulates atmospheric solidification with spatial energy reflection. An apparatus having a space between two conductive metal disks that is less than 2 inches functions like a synapse by firing as clear-medium projection, energy channeling and reflected spatial energy depletion.
